WINNIFRED NEWS

Mrs. Wm. Oelks who has been at the Calgary Sanitarium for several weeks returned home last Friday, she is much better and we have great hopes of full recovery.

Mr. and Mrs. W. E. Teubner have been sick for a week or more with the dreaded disease the Flu, at this time of the year when so much work is to be done, one should take to bed to prevent the spread of any contagious disease.

Dan Losey from Cassels Alta. came to town last Monday and returned Wednesday night on the freight taking with him a Registered Shore Horn Bell, a move in the right direction, as it costs no more to feed or care for a good animal than a scrub and in the end 'tis a much surer way of getting to the front

The stock around Winnifred have come through in good condition although the winter has been hard and long and the farmers had a limited supply of feed, but 'tis not alone feed which the stock need, good care and warm housing with feed and water at the proper time means as much to beasts as to man

And now comes more of the "beautiful snow" to gladden or maybeadden the poor farmers' hearts, we can only wonder "what will the harvest be?"

The roads are simply awful and will continue so as long as so much moisture falls

We have word from one of our old timers, "A. J. Works of White" on many occasions, that he never recollects with so much delight, the tongue of the buggy dropped down and the horse ran away throwing Worker out on his head and shoulders, bruising his head badly and breaking his arm in two places, at last account, he was suffering terribly. People cannot be too careful in the way their team is harnessed, one buckle unhooked often causes severe accidents, better take a little more time and have everything safe before starting

Mr. and Mrs. Harvey Davis who have a interest in Taber are again in Winnifred

Now there are some cases of Flu around it would be the only right and sensible thing to keep all Public Places Closed, until all the Flu has gone

Our advice to Everyone is to Stay Away from all Meetings, then You and your Family will run into No Danger of contracting any such disease. And as Plenty of Disinfectants "Prevention is Better than Cure"

It is to be hoped every Municipality will have their own "Mixing Machine" for thoroughly mixing the Poison Bait.

Sunday 16th. 30 above Sunny light snowfall during night

Monday 17th. 34 above Cloudy

Tuesday 18th. 32 " snowing fast

Wednesday 19th. 42 " very sunny

Thursday 20th. 46 " clear and bright

Hopper Menace

(Continued from front page)

The Farmers' Surprise

Many people have expressed surprise that recent snow storms have not killed these grasshoppers, but their eggs have hatched in the fall and have had a hidden life through the winter in old grass and other rubbish. The roadside grasshopper cannot survive severe weather, though it is not affected by snow or a few degrees of frost; since it does not hatch until about the middle of May at the earliest it is not likely to be exposed to colder weather than it can stand. The eggs are readily found now and farmers are urged to examine their fence rows and pastures for these eggs. When a breeding ground has been found it should be watched carefully from about the middle of May. When this is found to be swarming with minute grasshoppers, no larger than mosquitoes, the farmer who is wise will make a tour of all his fence rows, his pastures, old straw piles and the margins of slough water in or near his farm. He must make this egg tour on foot, for it is only by disturbing the grasshoppers as they walk through the grass that he will be able to estimate their numbers. Where they are numerous he will spend a good deal of time like wasp hunting from a public walk, in case there must be no delay to estimate the number of that are infected, half a mile of seed a red side is an acre - and obtain sufficient bait to scatter 25 lbs. of it over every heavily infested acre. A Week's delay may mean that the grasshoppers will have scattered over twice as many acres. They would then require twice as much bait and double the amount of labor in applying it.

Who is To Distribute "Poison Bait" on Unoccupied Land?

Several farmers are "quite anxious," to know whose duty it is to put the grasshoppers on the unoccupied land and couples are quite close to many of the Farmers' Land. This was should be the duty of one of the "Government Agents" who would summon them to put down the poison bait on any infected land.

About Feeding Your Stock

Here is another "big trick" for the Government to help out at this time. If there is so much "Poison Bait" all over the land, isn't there danger that the stock might eat some of it and die?

So where is it "Safe for the Farmer to Pasteur his Stock," because Passes might be "Alive with Grasshoppers" and the "Poison Bait" would have to be put down there, so as to kill off the Grasshoppers?

Where is the Farmer to go?

It would not be an Atom of Lasting Good to Poison some places and leave many acres untouched, to become a "Safe Sanctuary for the Grasshoppers" to defile the Farmers and from there to "fly over to the crops."

Well, how are many Farmers going to get "the Pasteur" for their Stock?

And what is the Farmer and the Government going to do about it?

"A Plan" should be drawn up and sent to all the Newspapers to carry the "Plan" into the homes of all the people in the Province.

And whatever is to be done should be "Planned" out "Very Quickly," for the roadside grasshoppers will soon be on us and we should

"Be Prepared."

We note that Mr. Skelhorn says "Billions of Grasshoppers" - in our previous articles we only said "millions" so it is much Worse than we thought for.

So the "Bow Island and Burdett Reviews" are the Farmers' "Real Friends" and we urge all Farmers to make "Urgent Enquiries" at an early date for the proper Poison Bait at the Municipal Office of the District they are living in.

It is to be hoped every Municipality will have their own "Mixing Machine" for thoroughly mixing the Poison Bait.

It is better to be too soon than too late.

Everyone owes some of his time to the upholding of the profession to which he belongs.

- Roosevelt

The All Saints' Surprise

Many people have expressed surprise that recent snow storms have not killed these grasshoppers, but their eggs have hatched in the fall and have had a hidden life through the winter in old grass and other rubbish. The roadside grasshopper cannot survive severe weather, though it is not affected by snow or a few degrees of frost; since it does not hatch until about the middle of May at the earliest it is not likely to be exposed to colder weather than it can stand. The eggs are readily found now and farmers are urged to examine their fence rows and pastures for these eggs. When this is found to be swarming with minute grasshoppers, no larger than mosquitoes, the farmer who is wise will make a tour of all his fence rows, his pastures, old straw piles and the margins of slough water in or near his farm. He must make this egg tour on foot, for it is only by disturbing the grasshoppers as they walk through the grass that he will be able to estimate their numbers. Where they are numerous he will spend a good deal of time like wasp hunting from a public walk, in case there must be no delay to estimate the number of that are infected, half a mile of seed a red side is an acre - and obtain sufficient bait to scatter 25 lbs. of it over every heavily infested acre. A Week's delay may mean that the grasshoppers will have scattered over twice as many acres. They would then require twice as much bait and double the amount of labor in applying it.

The All Saints' Ladies' Aid, held a successful Easter Sale last Saturday, selling out everything and securing a good number of Tea. The candy stall being very pretty decorated, with lovely Easter Lilies and cut flowers, Tulips and Lilies, also the Dainty Tea Tables were likewise decorated, great credit is due to the ladies for their dainty work.

The Aid wishes to thank all those who helped in any way whatever, to make it such a success.

Mr. Herb A. Wathen of Calgary has returned to Bow Island and is making preparations to put in the crop on his farm which he has rented from the Arable Estate. Herb is pleased to be back among his many friends and says crop conditions are looking better in Southern Alberta than they have for some time.

The Oldfathers Card Party and Dance, held in the L.O.O.P. Hall on Tuesday night was well attended, visitors coming from Winnifred and District.

Mrs. L. H. Hurst arrived last Friday on a visit to her son and his wife, Mr. and Mrs. S. Y. Hurst.

Mr. H. G. St. John, of Good Cheer is spending the week-end in town, with Rev. and Mrs. Hockin.

Miss A. Matsen returned last Monday from her week end visit to Winnifred, accompanied by her two brothers, all called in and finished up the evening in dancing in the L.O.O.P. Hall.

The little two year old child of Mr. and Mrs. Hanna has been very sick with Pneumonia for the past week or so, and up to the time of going to press, the little one has not improved very much. The Review sincerely hopes the little one may soon be well again.

"Scotian" leaving Southampton Harbor, as a troopship, en route for India. The "Scotian," which left Southampton Docks recently, embodies an experiment by the British Government which is to result in a substantial saving of money to the taxpayers. As is generally known, troops are conveyed to and from India in the winter months, when accommodation on vessels specially built for tropical waters is at the highest seasonal demand, and when the chartering of such vessels for conveying troops is very expensive. On the other hand, winter is the season when the North Atlantic trade is at its lowest ebb, and when some of the ships in that trade are normally laid up and the crews paid off. The Government have selected the Canadian Pacific steamers "Empress of Canada" and "Empress of Britain"—both engaged in the North Atlantic trade—for use as troopships during the coming season, and the "Scotian" has already been altered and fitted for the special work. The Mayor of Southampton, a number of Government officials and officials connected with the Canadian Pacific Steamships, Limited, a cable committee, the "Empress," and ex-crews, expressed the opinion that the difficulties in the way of providing suitable accommodation had been overcome, and that when the vessel was put to the practical test, the experiment would prove a success. The "Scotian" has deck saloons and well ventilated. Multitudes of fans and an auxiliary ventilating system have been installed to keep the cabins cool. Notwithstanding all this, it was decided that a comparatively small sum would be required to re-equip the vessel for her ordinary trade and afterwards to convert her when required into a troopship. During the war the "Scotian" took part in the Gallipoli operations: she steamed 128,000 miles on Government service, and carried 56,000 officers and men.

The Settlers Canada Wants

The figure of the recent census reinforces the fairly well recognized fact that one of Canada's needs is a larger population. With an area larger than that of the United States, with millions of the best agricultural lands in the world, and undeveloped natural resources of wealth beyond all human computation, this Dominion has a population comparable to that of little European countries like Belgium.

Recent figures have made to this outstanding Canadian problem on more than one occasion in this column, and while it is not necessary to repeat facts and figures, nor dwell at any great length on all the undoubted advantages which a substantial increase in Canada's population would bring to every man, woman and child, now is the time to say it may be well to continue urging the necessity for a sustained, a far-sighted, a progressive and aggressive national policy designed to meet Canada's needs in this respect.

Recently two important speeches were delivered in Eastern Canada on this subject, and in both instances commendable views were expressed and action advised. One speech was delivered by Sir Clifford Sifton before the Royal Canadian Trade and Commerce Club, and it is to be noted that if there is any man in Canada qualified to speak on the subject of population, and the relation of immigration thereto, it is Sir Clifford Sifton. He has had practical experience in handling the problem, and, while mistakes may have been made in his administration, he certainly succeeded in obtaining results to a greater degree than any other man before or since his regime as Minister of the Interior.

Sir Clifford showed he had little sympathy with many of the pet theories which find acceptance in some quarters these days. There is, in his opinion, but one way to accomplish the desired result, and that is to go after those who are agriculturists, tradesmen, and get them to come to Canada where they can make good. He is absolutely and unalterably opposed to bringing in immigrants by the million without reference to their ability to "make good" on the land. Half a million agricultural settlers of the right type are, in his opinion, worth ten million of other classes. Settlers on the land will work hard, and will bring about a natural permanent increase in population. Settlers of other classes, if brought in would inevitably find their way to the cities, and create new and difficult problems, which would drift to the United States.

The second address to which reference is made was by Professor C. R. Fox, Toronto, Ontario, on the subject "Principles of Co-operative Organization Policy." Like Sir Clifford Sifton he argued for a policy of going after and getting settlers of the agricultural labor class. At the same time he argued that good agricultural laborers could be obtained in the Old Country from a wider class than that of the farmers and farm laborers, if they are given the right training. He held that the only way Canada's immigration policy should provide for the gains of such immigrants is by co-operation instanced the success achieved in so many instances by soldier settlers under the Soldier Settlement Board. He advocated the extension of this policy for the direction of land settlement as a whole.

Professor Fox summed up modern conditions of successful settlement as requiring:

1. Land with reasonable marketing facilities.

2. The right kind of land for the settler and the right kind of crops for the land.

3. Sufficient capital; some settlers might be able to provide the whole for themselves, but assistance in the shape of loans would probably be required in most cases.

The first essential to holding good settlers on the land was the right policy of land settlements. The second was the reconstruction of rural life around the farm, and the active enterprise of co-operation means, he said, better houses, better farming, better marketing, and better roads.

The old policy of letting settlers into the country and then leaving them to shift for themselves will not do. They must be assisted in establishing themselves and taught as to the methods which make for success in this country. Furthermore, land in itself, or rather in advance of the adoption of an active policy, would not be available. There must be action by the Federal Government to ensure the people, the land and those who will come, adequate markets and marketing facilities for the end that the results of their labor may yield a reasonable profit over costs of production and as a reward for the labor given and the capital invested.

Legends on Rocks at Vancouver

Carvings on Rocks Said to be 2,000 Years Old

The peculiar carvings on the rocks along the shores of Spray Lake and Great Central Lake, Vancouver Island, gave rise to legends and traditions which were influenced by the people of the world. Scientific analysis and examination of these carvings show them to be at least 2,000 years old. This fact inclines one to believe the

Indian theory that immemorial creatures inhabited Vancouver Island, and that these carvings were made during that remote period. No one knows, even the Indian, how long ago it is since Chief Quatlat lived in the hills of the interior of Vancouver Island, and some of the Indians think that he still exists in invisible form. Quatlat had a wonderful record of vanquishing the prehistoric monsters, which were like the dreadful creatures portrayed in the carvings.

Portraits of Saints

Discovered in Rome

Expert Believes the Paintings Were Made from Life

Those who believed to be contemporaneous portraits of St. Peter and St. Paul have been surprised in a historical or underground structure of the Roman epoch. The belief in their authenticity is shared by the well-known archaeologist, Prof. J. G. C. Brinkhoff.

The hypothesis was found in the course of excavations for a building of a large garage. It comprised a number of rooms and galleries with a crypt, and a Christian Church with marvellous frescoes of a very early date. The professor believes the portraits were painted from life.

Sunday in Japan

Advantages Not Fully Understood by Most People

Tokio newspaper announces the imperial recognition of Sunday as a normal day of rest throughout Japan, as the result of the influence which Christianity is exerting now in a non-Christian nation.

The Government has been for years officially committed to a partial recognition of Sunday. On the Sabbath, imperial offices were closed, schools given a holiday, big banks did not open for business and many people ceased their labors.

The advantages of Sunday are not fully understood by most of the Japanese people. Christian preachers carefully train their followers that worship on the Sabbath is not work but the refreshing of body, soul and spirit.

Country laborers in Japan rest long hours with no pay, while workers in cities usually keep one or two days off each week.

Thus the Japanese do not know what to do with Sunday. As a result, most picture houses have sprung up with great rapidity in all the small villages in the empire. These do a lot of good, but Sunday, being the only way the masses know of using the God-given time.

Discovered True Remedy For Systematic Cataract

A bad case of cataract is not an easy thing to treat, and a remedy that makes good, deserves great credit. Canada has a good one, and it is to be hoped that if there is any man in Canada qualified to speak on the subject of population, and the relation of immigration thereto, it is Sir Clifford Sifton. He has had practical experience in handling the problem, and, while mistakes may have been made in his administration, he certainly succeeded in obtaining results to a greater degree than any other man before or since his regime as Minister of the Interior.

Sir Clifford showed he had little sympathy with many of the pet theories which find acceptance in some quarters these days. There is, in his opinion, but one way to accomplish the desired result, and that is to go after those who are agriculturists, tradesmen, and get them to come to Canada where they can make good. He is absolutely and unalterably opposed to bringing in immigrants by the million without reference to their ability to "make good" on the land. Half a million agricultural settlers of the right type are, in his opinion, worth ten million of other classes. Settlers on the land will work hard, and will bring about a natural permanent increase in population. Settlers of other classes, if brought in would inevitably find their way to the cities, and create new and difficult problems, which would drift to the United States.

The second address to which reference is made was by Professor C. R. Fox, Toronto, Ontario, on the subject "Principles of Co-operative Organization Policy." Like Sir Clifford Sifton he argued for a policy of going after and getting settlers of the agricultural labor class. At the same time he argued that good agricultural laborers could be obtained in the Old Country from a wider class than that of the farmers and farm laborers, if they are given the right training. He held that the only way Canada's immigration policy should provide for the gains of such immigrants is by co-operation instanced the success achieved in so many instances by soldier settlers under the Soldier Settlement Board. He advocated the extension of this policy for the direction of land settlement as a whole.

Professor Fox summed up modern conditions of successful settlement as requiring:

1. Land with reasonable marketing facilities.

2. The right kind of land for the settler and the right kind of crops for the land.

3. Sufficient capital; some settlers might be able to provide the whole for themselves, but assistance in the shape of loans would probably be required in most cases.

The first essential to holding good settlers on the land was the right policy of land settlements. The second was the reconstruction of rural life around the farm, and the active enterprise of co-operation means, he said, better houses, better farming, better marketing, and better roads.

The old policy of letting settlers into the country and then leaving them to shift for themselves will not do. 2. The right kind of land for the settler and the right kind of crops for the land.

3. Sufficient capital; some settlers might be able to provide the whole for themselves, but assistance in the shape of loans would probably be required in most cases.

The first essential to holding good settlers on the land was the right policy of land settlements. The second was the reconstruction of rural life around the farm, and the active enterprise of co-operation means, he said, better houses, better farming, better marketing, and better roads.

The old policy of letting settlers into the country and then leaving them to shift for themselves will not do. They must be assisted in establishing themselves and taught as to the methods which make for success in this country. Furthermore, land in itself, or rather in advance of the adoption of an active policy, would not be available. There must be action by the Federal Government to ensure the people, the land and those who will come, adequate markets and marketing facilities for the end that the results of their labor may yield a reasonable profit over costs of production and as a reward for the labor given and the capital invested.

Professor Fox summed up modern conditions of successful settlement as requiring:

1. Land with reasonable marketing facilities.

2. The right kind of land for the settler and the right kind of crops for the land.

3. Sufficient capital; some settlers might be able to provide the whole for themselves, but assistance in the shape of loans would probably be required in most cases.

The first essential to holding good settlers on the land was the right policy of land settlements. The second was the reconstruction of rural life around the farm, and the active enterprise of co-operation means, he said, better houses, better farming, better marketing, and better roads.

Smoke

OLD CHUM

The Tobacco of Quality
1/2 LB. TINS-and in pkgs.

Importance Of The Automobile

The 120,000 automobiles in Canada covered a road mileage in 1929 which exceeded 1,600,000,000 and included a passenger mileage of not less than 6,320,000,000. The steam and electric railroads of the Dominion combined carried but \$29,121,000, according to S. L. Squire of the Canadian Good Roads Association. The number of passengers carried is 352,000,000 annually.

Pains in Back, Limbs and Side

Yield to "Nervilene"

If you have failed in your efforts from other remedies, try "Nervilene," the strongest, most penetrating pain relief on the market. It relieves all kinds of small pains and is the surest to drive out the big ones. It's because every drop of "Nervilene" contains what has the ability to sink in deeply that it drives away pain that ordinary liniments and ointments can't. Large 32 oz. bottles.

His Idea of Them

Her Father—Young man, would you take my daughter away from me? You don't know a failure (feeling) more than I do, but I suppose there is.

Her Sister—Oh, that's all right. If you want to give three cheeks, go ahead.—Brooklyn Transcript.

Minard's Liniment for the Grippe and Flu

Comet Will Be Invisible

The Pons-Winnipeg comet will not be visible to the naked eye, according to Greenwich Observatory authority. It will pass the earth in June with a safe margin of some 12,000,000 miles.

Worms in children, if they be not attended to, cause constipation and ten days of fever. Gravida Worm Exterminator will protect the children from these distressing varieties.

Electricity in Switzerland

Nowhere else in the world is electric power so generally used as in Switzerland. In the small town of Lucerne, with only 40,000 inhabitants, to take one example, only twenty small houses are without electric light. There are several electric houses, 1,600 electric motors, 2,600 electric stoves for heating, 2,000 electric stoves and over 5,000 electric irons in use among the inhabitants.

Alberta Tax Revenue

\$19,102.68 From Amusement Tax in 1929.

The Alberta amusement tax during 1929 amounted to the sum of \$19,102.68 to the provincial treasury, an increase of \$10,934.23 over the preceding year. The general revenue of the department was \$169,319.29 for the year, a gain of \$69,866.79 over 1928. The general revenue and amusement tax was \$54,852.71 thousand. Corporations paid in taxes \$320,839.72; the Motor Vehicles Act brought in \$718,531.30; the Motor Owners Act, \$275,283.54; Coal Mines Act, \$10,200; the Motor Tax Act, \$25,592.75; the Road Mileage Act, \$19,309. The corporation tax was \$3,516; the companies ordinance, \$2,7316; the Act respecting auctioneers and peddlers, \$700; the oil and gas revenue, \$1,000; the balance. The number of oil and gas licences sold almost touched the 40,000 mark, the actual number being 39,852, an increase of 1,837 over 1928.

The number of companies incorporated in Alberta during 1929 was 1,200, ending the year with an aggregate capitalization of \$31,952,601.15.

New Variety of Wheat

Oregon State Evolves What With Smart-Rust Resistance

Wheat, totally resistant to smut or rust, heretofore unknown to plant pathologists, has been evolved at a research station experimentally at the Government Agricultural Experiment Station, Oregon, by B. E. Stephens, superintendent, and his assistants. The work has succeeded in producing four distinct varieties of wheat which are resistant to smut and rust, said he.

Thus, he has brought forth a number of hybrid varieties of great promise, by crossing his smut-resisting wheats with some of the most productive of the present varieties grown.

For Arthur Elevator

Contract for the construction of a 1,500,000 bushel capacity annex to the Arthur Elevator.

Port Arthur has been selected by Arthur and McDonald Construction Company.

The addition which is expected to be constructed in time to

harvest the 1932 crop, will give the elevator a capacity of 3,500,000 bushels.

The president of the French republic is provided with an official aero plane.

Horses Shipped to Yukon

Twenty heavy horses from a Moose Jaw ranch were shipped north from Vancouver on the steamer "Princess Mary" for Mayo and Whitehorse, in the Yukon.

A GOOD MEDICINE FOR THE SPRINGTIME

Do Not Use Harsh Purgatives—A

"Nest" stick—not feeling quite well,

that is the way most people feel,

especially after appetite

fiddle, sometimes headaches and a

feeling of depression. Pictures or

captions always on the side of

the bed may be twinges of rheumatism or neuralgia, or perhaps a

feeling of heat in the blood, or

the blood is in order that the indoor life of winter has left its

body to develop into more serious trouble.

Do not dose yourself with purgatives gallop through the system, and hope that you can put your blood right.
